**THE Governor's** remarks on the desert land law, while containing some good ideas, also contain some that, in our opinion, are not so good. When he says that the business and pre-emption laws are not suitable for the settlement of Arizona, he states what in the main is correct, for the rays of land in Arizona on which crops can be raised without irrigation is very small. The Governor would subsidize with liberal grants of land companies to construct irrigation works, and at the same time allow them to charge \$5 an acre for water rights, which would be practically allowing them a double subsidy. The allowing them to charge \$5 an acre for water rights is sufficient to secure any company against the risk incurred in constructing any ordinary works, and in the majority of instances will entirely reimburse them for any outlay. As a rule these irrigation works are carried on by large companies, and the members of the companies have the right to locate land under the desert land law, as well as the different members of their families, so that, as the law at present stands, the men comprising these companies have ample opportunity to get all the land they want, or should be allowed to hold, besides having the cost of the enterprise paid back to them in the shape of water rights, which ought to satisfy any body of capitalists; and then they have a steady income from the selling of water. For these reasons we do not agree with the Governor on his proposition to subsidize irrigation companies with land, nor do we agree with him on the other proposition that the general government should give all the desert lands to the Territory. It would be too great a temptation for aggregated capital, through pliable legislatures, to get possession of vast bodies of land for speculative purposes, which would be in direct contravention of the policy of the government to hold its land for the benefit of people who will go onto it and make homes. It appears to us that the better course to pursue is to let the desert land law remain as it is at present, and let a strong effort be made to so modify the irrigation law passed at the last session of Congress as to allow entries under the various land laws as they were prior to the passage of that act. Experience has shown that, under the conditions existing heretofore, men of means are willing to construct irrigation works involving the outlay of large sums of money, and to further enrich them by large grants of land would be at the expense of our rapidly increasing population who are continually, and in geometrical ratio, pressing westward in quest of homes.

A Tale Old and

A bold old man, Mr. J. W. Williams of Aliens Springs, U. S., who is over sixty years of age, says: "I have in my time tried a great many businesses, some of excellent quality; but never before did I find one that we did not come lately about that I got nothing out of, as Chamberlain's Gold, Chelona and Mountain Honey. It is truly a wretched meddlesome." For sale by H. A. Pease.
